

Service Fees and Structure

Core Unit Stem Cell Technologies

Prices are effective as of the Core Unit opening and are subject to future adjustments.

Type of Service	Internal User of MFM*	External Academic User*	External User (EUR)
iPSC Line Reprogramming	1.250 EUR	7.757 EUR	Price upon request
Genome Editing – Knockout	1.200 EUR	6.645 EUR	Price upon request
Genome Editing – Point Mutation	2.760 EUR	10.413 EUR	Price upon request
QC – Digital Karyotyping	420 EUR	1.102 EUR	Price upon request
QC – 3-Lineage Differentiation	540 EUR	3.580 EUR	Price upon request
2D Culture Differentiation	Price upon request (dependent on cell type and final differentiation point)	Price upon request (dependent on cell type and final differentiation point)	Price upon request (dependent on cell type and final differentiation point)
Cortical Organoids	Price upon request (dependent on organoid number and final differentiation point)	Price upon request (dependent on organoid number and final differentiation point)	Price upon request (dependent on organoid number and final differentiation point)
Midbrain Organoids	Price upon request (dependent on organoid number and final differentiation point)	Price upon request (dependent on organoid number and final differentiation point)	Price upon request (dependent on organoid number and final differentiation point)
Thalamic Organoids	Price upon request (dependent on organoid number and final differentiation point)	Price upon request (dependent on organoid number and final differentiation point)	Price upon request (dependent on organoid number and final differentiation point)
Retinal Organoids	Price upon request (dependent on organoid number and final differentiation point)	Price upon request (dependent on organoid number and final differentiation point)	Price upon request (dependent on organoid number and final differentiation point)

- **Except for Contract research*
- *All fees contain a 20 % risk surcharge*
- *Fees for external users contain site-specific overhead costs and are exclusive of statutory VAT*

Coming Soon: We are currently establishing protocols for **Bone Marrow Organoid** generation, as well as a library of iPSC lines for broad use. These services will be available in the near future.
